

Patients

app

Access

Otto Ebenbichler recommends:

„Basically the platform offers three different permission levels.

System managers can see and edit all data, all modules and apps. Administrators can edit contents. Observers have view rights but no edit rights.

So the system allows to structure different levels of collaboration.”

allow access

You allow access by clicking the title "Administrator" or "Observers" - a contact search window opens. Now select a single contact ("Contact" tab) or an entire contact group ("Group" tab) from the module „contacts“. The selected contacts have immediate access to patient data.

delete access

You delete an access by clicking on the respective names right next to the title "Administrator" or "Observers" - a dark gray Info window opens. Click "delete". The contact will be deleted from the list, the access to patient data is locked.

access levels

Note that access can only be awarded if the respective contact previously has received access codes in the module "contacts".

level 1: System Manager

System Managers can see and edit all the information on the platform. They exclusively have the right to assign other System Manager accesses and exclusively are allowed to work with the module "Recycle Bin".

level 2: Administrator

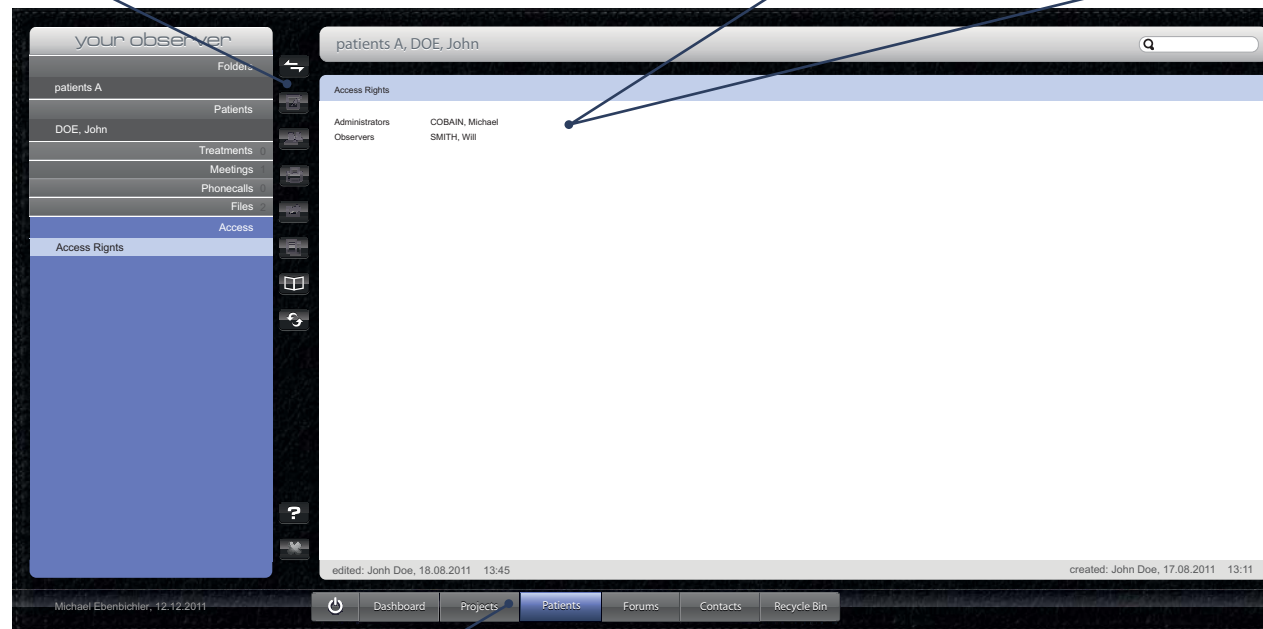

Administrators see all the information for which they have been unlocked. They can edit and unlock these informations for other administrators or observers. They also have access to the module "Contacts" and are able to edit these contents.

level 3: Observer

Observers only see informations for which they have been unlocked and which has been defined as "authorized". They can't edit any content.

modules

This gray bar shows the modules you are allowed to work with. With one simple mouse click on a module title you switch to the desired module. The position at which you leave the module remains stored, that means by going back you will get to the same place where you have left the module.
