

# Patients

app

## Patients

Otto Ebenbichler recommends:

„By this app you document all key data of a patient and define his current status (entered, in care, in evidence).“

The checkpoint feature that is available in this app can be used to be informed about upcoming dates of diagnosis or special treatment appointments.”

## menue icons

- public access
- observer permission
- captured
- in treatment
- descending order
- ascending order
- individual order
- close/open menue

## command bar

- inactive
- print content
- send content as an email
- inactive
- patient file
- refresh platform
- download manual
- delete all data

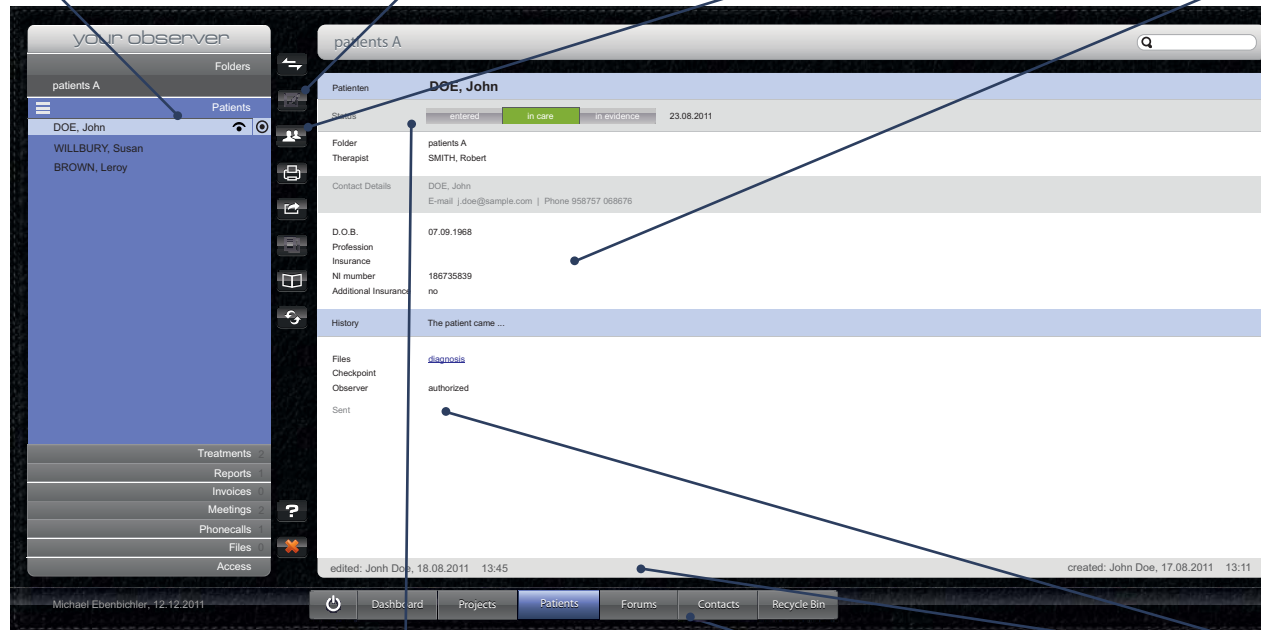

## contact import

To create a new patient you have to document this person in the module contacts in a first step. Then you will be able to import this contact by the icon . Main general data (email address, phone number, etc.) will be taken over automatically.

## data editing

Each imported contact provides email address or phone number. These contact data (in grey font) are editable only in the module contacts. All patient parameters (folder, therapist, date of birth, etc.) are editable in this module.

## status

Always make sure that every patient has his correct current status (entered, in care, in evidence).

## modules

This gray bar shows the modules you are allowed to work with. With one simple mouse click on a module title you switch to the desired module. The position at which you leave the module remains stored, that means by going back you will get to the same place where you have left the module.

## autor information

Here you receive "log information". It is documented by whom and when the last entry dates (entry links) and by whom and when this data sheet was created (entry right).

## sent

„Sent“ works automatically. Once you have sent the contents of this page by , the programm generates an entry to whom and when this content was sent.
